Department	Computer Engineering
Academic Year	2026–2027
Subject	Entrepreneurship Development
Faculty Name	Romana Firdose Iliyas Shaikh
Date of Submission	25/10/2026

A proposed urban gardening service for balconies, terraces, and compact green spaces

1. Executive Summary

NAVRO Living is a proposed urban gardening service that helps residents transform balconies, terraces, and other compact areas into attractive and functional green spaces. Many people living in cities want plants at home but may lack space, time, gardening knowledge, or confidence in choosing suitable plants and materials. NAVRO Living addresses this need through customized garden planning, plant and planter selection, installation, and basic maintenance guidance. Its target customers include apartment residents, homeowners, working professionals, and people interested in greener lifestyles. The business will use digital marketing, especially Instagram and WhatsApp, alongside referrals and local partnerships. The initial investment is estimated at ₹2,50,000, subject to supplier quotations and validation of customer demand.

2. Introduction

Entrepreneurship involves identifying a need or opportunity and organizing resources to provide a solution while managing risk. NAVRO Living is based on the opportunity to make gardening more accessible to people who live in urban homes with limited outdoor space. The brand aims to combine practical garden design with a premium, modern, nature-inspired appearance. Its tagline, “New Beginnings. Greener Living.”, reflects the idea of making everyday living spaces greener and more welcoming.

3. Problem Statement / Business Opportunity

Urban residents often have small balconies or terraces that remain unused or are not suitable for gardening without planning. Customers may be unsure which plants can survive in the available sunlight, how to arrange pots, what soil or materials to use, or how to maintain plants. Buying items separately can also take time and may result in an unsuitable setup. This creates an opportunity for a service that offers a convenient, personalized, and coordinated gardening solution.

- Apartment residents with limited outdoor space.
- Working professionals who want greenery but have limited time.
- Homeowners who want to improve the appearance of balconies and terraces.
- Beginners who need guidance with plant selection and maintenance.

4. Proposed Business Idea

Business Name: NAVRO Living

Product or Service: Customized balcony gardens, terrace gardens, small-space garden installation, plant and planter selection, soil preparation, and maintenance guidance.

Target Customers: Apartment residents, homeowners, working professionals, gardening beginners, and customers interested in sustainable living.

Value Proposition: Convenient and personalized gardening solutions designed around a customer's space, preferences, and budget.

Unique Selling Proposition (USP): A coordinated end-to-end service combining thoughtful space planning, suitable plant selection, attractive design, and practical guidance for compact urban spaces.

5. Objectives of the Business

- Provide customized and practical gardening solutions for small urban spaces.
- Build a recognizable, trustworthy brand with a premium botanical identity.
- Achieve customer satisfaction through suitable plant selection, neat installation, and clear care instructions.
- Generate revenue through installation projects, maintenance packages, and gardening materials.
- Develop a repeat-customer base through maintenance support and referrals.
- Expand gradually into vertical gardens, office greenery, workshops, and gardening kits.

6. Market Research and Analysis

Target market and customer needs

The initial target market is urban households with balconies or terraces, particularly customers who value home improvement and greenery but need help setting up a garden. Key customer needs include affordable packages, designs suited to available sunlight and space, reliable installation, easy-care plant options, and after-installation guidance.

Customer survey or feedback

A structured customer survey should be conducted before launch to measure interest, preferred budget, desired garden type, maintenance needs, and willingness to pay. No formal survey results are assumed in this report. Feedback from early trial customers should be recorded and used to improve service packages.

Competitor analysis

Potential competitors include local nurseries, independent gardeners, landscaping providers, and online plant retailers. Nurseries may offer plants and materials but not always complete space planning or installation. Independent gardeners may provide maintenance at a lower cost. NAVRO Living can differentiate itself through customized design, a coordinated service, clear packages, visual project examples, and customer support.

Market demand and business opportunity

Interest in home improvement and urban greenery may support demand for compact gardening services. However, local demand and achievable prices must be confirmed through customer interviews, competitor price checks, and a small pilot launch. The business should begin in a limited service area before expanding.

7. Business Model

Business Model Canvas Element	NAVRO Living
Customer Segments	Apartment residents, homeowners, working professionals, and gardening beginners.
Value Propositions	Customized, space-efficient, visually appealing gardens with practical plant-care guidance.

Channels	Instagram, WhatsApp Business, referrals, local housing societies, and a simple website or enquiry form.
Customer Relationships	Personal consultation, follow-up after installation, care instructions, maintenance plans, and referral offers.
Revenue Streams	Installation packages, design consultation, recurring maintenance, and sale of plants, pots, soil, and gardening kits.
Key Resources	Gardening tools, plants, planters, soil and growing media, transport, design skills, supplier network, and digital presence.
Key Activities	Consultation, site assessment, design, sourcing, installation, maintenance guidance, marketing, and customer support.
Key Partnerships	Local nurseries, planter and gardening-material suppliers, delivery providers, and housing societies.
Cost Structure	Plants and materials, tools, transport, marketing, website and branding, labour, registration, and working capital.

8. Marketing and Sales Strategy

- Branding: Use the NAVRO Living name and tagline with forest green, sage, warm ivory, and natural textures.
- Pricing: Offer starter, standard, and premium packages. Set final prices based on space, plants, materials, labour, transport, and margin.
- Promotion: Publish before-and-after photos, short Reels, plant-care tips, project walkthroughs, and customer testimonials with permission.
- Digital marketing: Use Instagram and WhatsApp Business to display services, answer enquiries, share quotations, and arrange consultations.
- Sales channels: Direct enquiries, referrals, local housing societies, nursery partnerships, and a website or enquiry form.
- Customer retention: Provide aftercare instructions, optional maintenance, seasonal recommendations, and referral incentives.

9. Operational Plan

NAVRO Living can initially operate from a home-based administrative setup and serve a defined local area. A dedicated retail shop is not essential during the early stage. Plants and materials can be sourced from local nurseries and gardening suppliers according to each confirmed project.

Typical project workflow:

1. Receive the enquiry and understand the customer's goals and budget.
2. Assess the site, including dimensions, sunlight, water access, drainage, and wind exposure.

3. Prepare a design and quotation, confirming materials, installation scope, and timeline.
4. Purchase suitable plants, pots, soil, and other materials from suppliers.
5. Install the garden safely and neatly, then explain watering and plant-care requirements.
6. Follow up with the customer and offer optional maintenance support.

Required resources include gardening tools, gloves, measuring equipment, containers, soil and growing media, plants, transport arrangements, a smartphone, and digital marketing tools. Initially, the founder can manage consultation and coordination, with skilled assistance arranged for larger installations.

10. Financial Plan

All amounts below are preliminary planning estimates, not confirmed quotations or actual financial results. They should be revised after supplier price checks, local customer research, and pilot projects.

Start-up Cost Item	Estimated Amount
Tools and equipment	₹45,000
Website and branding	₹25,000
Plants, pots, soil, and materials	₹50,000
Transportation setup	₹20,000
Registration and legal expenses	₹10,000
Initial marketing	₹20,000
Working capital reserve	₹80,000
Total estimated start-up investment	₹2,50,000

Pricing and break-even assumptions

Financial Measure	Estimate / Calculation
Average revenue per project	₹10,000
Estimated variable cost per project	₹5,500
Contribution per project	₹4,500
Estimated monthly fixed costs	₹45,000
Break-even volume	₹45,000 ÷ ₹4,500 = 10 projects/month
Break-even revenue	10 × ₹10,000 = ₹1,00,000/month

At the assumed average price and cost, approximately 10 projects per month are needed to cover estimated monthly fixed costs. Actual profit will depend on project mix, material wastage, labour, transport, taxes, seasonality, and customer demand. The break-even calculation excludes additional financing costs or unplanned expenses.

11. SWOT Analysis

SWOT Area	Analysis
Strengths	Personalized service; focus on compact spaces; coordinated design and installation; clear nature-inspired branding.
Weaknesses	New brand with limited recognition; dependence on suppliers; limited early-stage capacity; seasonal plant-care requirements.

Opportunities	Growth into vertical gardens, office greenery, maintenance subscriptions, workshops, and gardening kits.
Threats	Competition from nurseries and gardeners; changing material prices; plant disease or damage; lower-than-expected customer demand.

12. Legal and Intellectual Property Considerations

The business should confirm the suitable business structure and any applicable registration or local permissions before commencing operations. Requirements depend on the actual location, scale, staffing, and nature of activities. GST registration should be checked against applicable turnover and other legal criteria, and proper invoices and records should be maintained. Customer quotations should clearly state the scope of work, payment terms, material choices, installation conditions, and maintenance responsibilities.

NAVRO Living should consider protecting its brand name and logo through an appropriate trademark process after checking availability. Original website copy, photographs, videos, and marketing designs may receive copyright protection under applicable law. Confidential business processes and supplier terms should be handled carefully. Legal and intellectual-property steps should be verified with official sources or a qualified professional.

13. Risks and Challenges

Risk	Management Strategy
Financial risk	Costs may exceed estimates or sales may be slow. Maintain working capital, track project costs, and review pricing.
Operational risk	Plant damage, delays, or unsuitable site conditions may affect quality. Assess sunlight, drainage, and access before installation and source healthy plants.
Marketing risk	Social-media reach may not convert into enquiries. Track enquiries and bookings, test content formats, and use local referrals.
Customer-related risk	Expectations may be unclear or care instructions may not be followed. Confirm requirements in writing and provide aftercare guidance.
Competitive risk	Other providers may offer similar services. Differentiate through design quality, reliability, transparent packages, and after-sales support.

14. Implementation Plan

Estimated Timeline	Main Activities

Weeks 1–2	Research local competitors, interview potential customers, and confirm preferred service packages.
Weeks 3–4	Finalize sample designs, supplier options, package pricing, branding, and enquiry process.
Month 2	Complete a small pilot, document results with permission, collect feedback, and refine the service.
Month 3	Launch promotional content, contact housing societies and local partners, and begin accepting projects.
Months 4–6	Track costs and customer satisfaction, introduce maintenance packages, and review progress against targets.
After 6 months	Evaluate demand and capacity before expanding to additional areas or new services.

This timeline is a proposed plan and may change depending on customer feedback, supplier availability, funding, and permissions.

15. Expected Outcomes

- Customers receive greener, more attractive, and better-organized balcony or terrace spaces.
- The business develops a portfolio of completed projects and customer referrals.
- Revenue is generated through installations, maintenance, and related gardening products.
- The business may create work opportunities for gardeners, installers, delivery partners, and local nurseries as demand grows.
- Future services may include vertical gardens, office plants, workshops, and home gardening kits.

16. Conclusion

NAVRO Living is a proposed service business that responds to the need for practical greenery in compact urban homes. Its customized approach, coordinated installation service, and digital-first promotion provide a foundation for testing the idea on a small scale. The preliminary financial model estimates an initial investment of ₹2,50,000 and a break-even level of about 10 projects per month under the stated assumptions. The business should validate customer demand and costs before making major commitments. Careful planning, quality execution, customer feedback, and responsible financial management will be important for long-term growth.

- Official government sources for applicable business registration, GST, and intellectual-property requirements should be consulted before launch.

Note: No external market-size statistics or formal customer-survey results have been claimed. Market-demand statements are qualitative and should be validated through primary research.

18. Student Reflection

1. What did you learn from preparing this business report?

I learned how to organize a business idea into a complete plan covering customers, services, marketing, operations, finance, risks, and future growth. I also learned that financial figures should be treated as assumptions until supported by quotations and actual sales data.

2. What challenges did you identify?

The main challenges are estimating realistic project costs, finding suitable plants and materials, reaching customers, maintaining plant health, and competing with established nurseries and gardeners. Customer demand and willingness to pay also need to be tested.

3. How would you improve the business idea?

I would conduct a customer survey, test a few clearly priced garden packages, document pilot installations, and use customer feedback to improve designs. I would also build reliable supplier partnerships and introduce optional maintenance services to support repeat business.
