Arogya Pranali: **Intelligent** Health Systems for Bharat

3 UN SDG GOAL GOOD HEALTH & WELL-BEING

01 Problem Statement

People may not know what PM-JAY covers, whether they are eligible, which hospitals to approach, or what to do next. Language, literacy and weak internet can make access harder.

02 Objectives

- Make PM-JAY guidance clearer; help users find relevant hospitals; explain documents and next steps.

03 Design Thinking Journey

EMPATHISE — Questionnaire with 23 respondents
DEFINE — Awareness and navigation gaps
IDEATE — Compared awareness, print and digital solutions
PROTOTYPE — Need-first website workflow

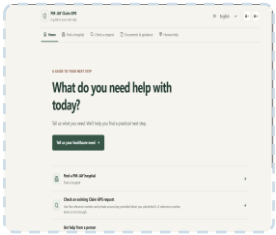

04 Research Evidence

Primary research: questionnaire (n=23).
Key gap: interest in applying is higher than awareness of eligibility, benefits and nearby hospitals.
Reference basis: National Health Authority PM-JAY information and NITI Aayog programme context.
Evidence informs the design; effectiveness still needs validation.

05 Ideation & Solution

Need-first workflow: user need → guidance → hospital information → documents → assistance.

06 Prototype / Circuit/ Photos

07 Results, Observations & Failure Log

Survey of 23 respondents: 65% did not know eligibility; 70% did not know benefits.
74% wished to apply; 65% did not know nearby PM-JAY hospitals.
Finding: strong interest, but practical awareness gaps.

08 Impact

SDG 3: supports navigation to healthcare information.
User value: clearer next steps, easier discovery and less confusion.
Potential to save time and unnecessary trips; actual impact needs testing.
Scale-up: verified hospital data, regional languages and low-connectivity support.

09 Conclusion & Future Scope

PM-JAY Claim GPS turns a healthcare question into a guided next step. Next: test with users, verify hospital records, improve language/accessibility features, and explore authorised integrations.
