PART A

(PART A: TO BE REFERRED BY STUDENTS)

Experiment No. 01

A.1 Aim

• To identify a real-world problem and prepare a problem statement and scope statement for a business idea.

A.2 Prerequisite

Students should have:

• Basic understanding of entrepreneurship concepts.

• Knowledge of business opportunities and value addition.

• Familiarity with problem identification techniques.

• Basic understanding of agricultural and small business enterprises.

A.3 Outcome

After successful completion of this experiment students will be able to:

• Identify real-life entrepreneurial problems.

• Analyze business opportunities from existing problems.

• Prepare an effective problem statement.

• Develop a scope statement for a business idea.

• Convert a practical problem into a profitable entrepreneurial opportunity.

A.4 Theory

Entrepreneurship begins with identifying a real-world problem that affects individuals, businesses, or society. Every successful business is built around solving a customer problem or fulfilling an unmet need.

A **Problem Statement** clearly explains the existing difficulty faced by a person, business, or community. It identifies the cause of the problem and highlights why it needs to be solved.

A **Scope Statement** defines the proposed business solution. It explains what products or services the business will offer, the target customers, and the expected benefits.

By identifying problems and proposing innovative solutions, entrepreneurs can transform challenges into profitable business opportunities.

Case Study

Mango Processing Business

Mr. Ramesh owns **400 mango trees**. Every harvesting season, a large quantity of mangoes gets spoiled because of:

• Overproduction

• Poor storage facilities

• Transportation delays

• Limited buyers

Instead of selling fresh mangoes at lower prices, he plans to establish a **Mango Processing Unit** to manufacture value-added products such as:

- Mango Jam
- Mango Pulp
- Mango Jelly
- Mango Nectar
- Mango Pickle

This business idea reduces wastage, increases shelf life, and generates higher profits.

Problem Statement

"Mr. Ramesh faces heavy post-harvest losses every year because a large quantity of mangoes gets spoiled during the harvesting season due to overproduction, poor storage facilities, transportation delays, and a limited number of buyers."

Scope Statement

"The proposed business will establish a mango processing unit to convert surplus and ripe mangoes into value-added products such as mango jam, pulp, jelly, nectar, and pickle. The

business will focus on reducing fruit wastage, increasing shelf life, improving farmers' income, and supplying quality products to local markets, retailers, and online customers."

Tools / Materials Required

- Notebook
- Pen/Pencil
- Internet (optional)
- Case Study
- Observation Sheet

Procedure

1. Observe the given business situation carefully.
2. Identify the main problem faced by the entrepreneur.
3. Analyze the causes of the problem.
4. Identify possible business opportunities.
5. Select the most practical and profitable business idea.
6. Prepare the problem statement.
7. Prepare the scope statement.
8. Present the business idea clearly.

Observation Table

Sr. No.	Problem Observed	Business Opportunity	Selected Business Idea
1	Mangoes spoil due to overproduction and delayed sales	Mango Processing Unit	Mango Jam, Pulp, Jelly, Nectar and Pickle Production

---

Expected Outcome

Students will learn to identify real-world business problems and convert them into profitable entrepreneurial opportunities by developing appropriate problem and scope statements.

PART B

(PART B : TO BE COMPLETED BY STUDENTS)

Roll No.: C-60

Name: Avdhut Parish Madhavi

Class/Batch: SE-C2

Date of Experiment: _____

Date of Submission: _____

Grade: _____

B.1 Observations and Learning

1. Many urban residents want green spaces at home but may lack gardening knowledge, time, or a suitable plan for their balcony or terrace.

2. NAVRO Living creates value by providing personalized balcony garden design, rooftop and terrace garden installation, kitchen gardens, plant selection, and garden maintenance.

3. A well-planned garden makes better use of available space by considering sunlight, layout, suitable plants, and care requirements.

4. Business opportunities arise from solving practical problems. NAVRO Living helps apartment residents and homeowners create attractive and functional green spaces according to their needs and preferences.

5. Combining consultation, customized design, installation, and maintenance can provide convenience to customers and create different sources of revenue for NAVRO Living.

B.2 Conclusion

This experiment demonstrates how a real-world problem can be converted into an entrepreneurial opportunity. NAVRO Living aims to help urban residents make their homes greener through personalized balcony and rooftop garden design, kitchen gardens, plant selection, installation, and maintenance. The business can make gardening more convenient and help customers use their available space effectively. Its success will depend on understanding customer needs, providing suitable garden solutions, maintaining service quality, and managing costs effectively.

B.3 Question of Curiosity

1. What is a problem statement, and why is it important in entrepreneurship?

   A problem statement clearly describes an existing problem, its causes, and why it needs to be solved. It helps an entrepreneur understand customer needs and develop a focused business solution. For NAVRO Living, the problem is that some urban residents want home gardens but lack the time, knowledge, or planning needed to create and maintain them.

2. Differentiate between a problem statement and a scope statement.

   A problem statement explains the difficulty faced by customers, while a scope statement describes the proposed solution, services, target customers, and expected benefits. For NAVRO Living, the problem statement focuses on the challenges of creating and maintaining home gardens, while the scope statement includes garden design, installation, plant selection, and maintenance.

3. How does value addition increase business profitability?

   Value addition increases profitability by providing extra usefulness or convenience to customers. NAVRO Living can combine consultation, customized garden planning, installation, plant selection, and maintenance into a complete service. Profitability depends on customer demand, pricing, labour, material costs, and operating expenses.

4. Suggest two other agricultural products that can be converted into value-added products.

   - Sugarcane can be processed into jaggery or sugar.
   - Tomatoes can be processed into puree, ketchup, or dried products.

5. Explain how entrepreneurship helps solve real-life business problems.

   Entrepreneurship identifies unmet needs and develops practical solutions that create economic or social value. NAVRO Living addresses the need for convenient urban gardening by helping customers design, install, and maintain green spaces that suit their homes and preferences. This creates a business opportunity while encouraging greener living.

Date: / /

Problem statement:-

Urban residents, particullary those living in appartment face the shortage of green space due to lack of space, lack of knowledge & inadequate resource resulting in reduced urban greenary, limited access to home-grown vegies, and fewers opportunities to promote sustainable living practices.

Scope statement:-

The scope of this Project is to develop & provide rooftop & balcony gardening services for urban households and housing societies. This project will focus on utilizing available rooftop & balcony spaces for growing plant, herbs, vegies.

Scope includes:-

- Rooftop & balcony garden setup.
- selection of suitable plants & vegies
- Affordable gardening kits & materials.
- Promotion of sustainable gardening practices.

Who can be beneficial from this:-

1. consumers
2. Gardeners
3. Environment
4. Buisness
5. Farmers / providers
